

Martina Iannacito | Curriculum Vitae

Ph.D. in applied mathematics and scientific computing of the University of Bordeaux

✉ martina.iannacito@kuleuven.be • 🌐 martinaianacito.github.io
• born 28th November 1995, Italian citizenship

Research activities

Katholieke Universiteit Leuven

Belgium

Postdoctoral researcher at the Science, Engineering and Technology faculty

May 2023 - now

Member of L. De Lathauwer's research group

Keywords: canonical polyadic decomposition, blind source separation, algebraic algorithms

Inria center at the university of Bordeaux

France

Ph.D. student

October 2019 - December 2022

Member of the Concase and HiePACS team

Keywords: numerical linear algebra, tensor computation, low-rank compression, data science

University of Trento

Italy

Master's student

January 2019 - July 2019

Member of the Mathematical Department

Keywords: tensor computation, remote sensing, biodiversity estimate

Education

Inria center at the university of Bordeaux

France

Ph.D. in applied mathematics and scientific computing

October 2019 - December 2022

Thesis supervised by O. Coulaud and L. Giraud

Defence date December the 9th, 2022

University of Trento

Italy

Master's degree in mathematics for life and data science

December 2017 - July 2019

Thesis supervised by A. Bernardi and D. Rocchini

Defence date July the 17th, 2019, Summa Cum Laude

University of Parma

Italy

Bachelor in mathematics

October 2014 - December 2017

Thesis supervised by A. Bandini

Defence date December the 14th 2017, Summa Cum Laude

Scientific High School G. Aselli

Italy

Maturity diploma

September 2009 - July 2014

Defence date July the 4th, 2014, Summa Cum Laude

Teaching activities

ENSEIRB-MatMeca

France

Adjunct lecturer, 47 hours

March 2021 - May 2022

Numerical algorithms

University of Trento
Tutor, 50 hours
Statistical Learning: Statistical Models

Italy
Januray 2019 - June 2019

Evaluation activities

Final Education Project
External jury member

ENSEIRB Bordeaux
September 2022

Master's students supervision

Kobe Sauwens
Master's degree in mathematical engineering
Thesis supervised by L. De Lathauwer and V. Rijmen
"Exploration of Polyadic Tensor Decomposition as a tool for public key cryptography"

KU Leuven
September 2023 - now

Andreas Devogel
Master's degree in mathematical engineering
Thesis supervised by L. De Lathauwer
"Algebraic algorithms for tensor-based signal separation "

KU Leuven
September 2023 - now

Internship students supervision

Léo Bertheas
Electrical and Electronics Engineering degree
2nd year stage supervised by O. Coulaud, L. Giraud, and J. R. Poirier
"Solving the heat equation in Tensor Train format"

ENSEEIH Toulouse
June 2021 - August 2021

Doctorate

<i>Title</i>	Numerical linear algebra and data analysis in large dimensions using tensor format
<i>Defence</i>	December 9th, 2022 in the Inria center at the university of Bordeaux
<i>Advisors</i>	Olivier Coulaud, researcher at the Inria center at the university of Bordeaux Luc Giraud, researcher at the Inria center at the university of Bordeaux
<i>Jury</i>	Alain Franc, researcher at the INRAE center Daniel Kressner, full professor at EPFL, REVIEWER Karl Meerbergen, full professor at KU Leuven, REVIEWER Anthony Nouy, professor at Nantes University Valeria Simoncini, full professor at Bologna University Nick Vannieuwenhove, associate professor at KU Leuven
<i>Key words</i>	tensor calculus, low-rank compression, numerical linear algebra, data analysis
<i>Abstract</i>	<p>This work aims to establish which theoretical properties of classical linear algebra techniques, developed in two different contexts, namely numerical linear algebra and data analysis, are maintained and which are lost when extended to low-rank tensors.</p>

In the numerical linear algebra part, we experimentally study the effects of rounding errors on an iterative solver (Generalised Minimal RESidual) and several orthogonalization methods (Classical and Modified Gram-Schmidt and Householder transformation, among others) when extended to tensors by the Tensor Train (TT) formalism. In all the considered algorithms, we introduce additional rounding steps, with the TT-rounding compression algorithm, to cope with memory constraints, which are always crucial when dealing with tensors. Our experimental tests suggest that for these algorithms, the classical bounds due to the propagation of rounding errors remain valid, replacing the accuracy of the arithmetic with that of the TT-rounding algorithm.

In the data analysis part, we geometrically study the generalization of correspondence analysis to multi-way tables by the Tucker tensor decomposition technique, thus contributing to the understanding of Multi-Way Correspondence Analysis (MWCA). Examples of MWCA applied to datasets complement the theoretical results. In particular, we perform the MWCA on an original ecological dataset provided to us in the framework of the Malabar project of the BioGeCo (INRAE) and Pleiade (Inria) teams.
